

CI 102 - Team Profile

Complete the information below for your project. Note that team membership is subject to final approval by the instructor.

Team

Lab section: 68

Team Number 06 (The instructor will provide this number)

Team Members and Roles

List the full name and user ID of every member of your team. Assign initial roles that team members will play. Team members without specific roles should be assigned as “Developer”.

Name	User ID	Role
David Stone	dms569	Application Developer
Ryan Hoffecker	rah355	Application Developer
Andrew Maxwell	arm467	Business Designer
Joe Hickey	jjh373	Technical Designer

Project

What is your project concept? (this should be an expansion of the pitch)

Our project plans to use a calendar API and a weather API to gather information about the weather when your classes are scheduled. This would be done for before and after your class and would notify you about the weather,

What resources will you need to complete your project (for example, servers and other physical materials)?

A computer and an IDE. An Android phone to test it on.

What are some areas your team will need to learn or try before determining that this project idea is viable?

We will need to do some research on the weather API and the calendar API before we are sure that this idea will work.
