

Client: What I want is an app that syncs my class schedule to the weather so that I can know to bring an umbrella for rain that will come after a lecture ends.

Interviewer: How would you like this app to look?

Client: I want it to be so simple that I can open it and instantly see the current weather and what I need to wear and bring to my next classes. I want notifications if there is particularly bad weather like rain.

Interviewer: How will we get your schedule data?

Client: By syncing it to the DrexelOne schedule.

Interviewer: How often would you want to see notifications for this app?

Client: I want it to be customizable. Some people would want notifications before every class, but I would only want to be notified for rain.

Interviewer: How soon before classes would you want to see the notifications?

Client: I would want the notifications 30 minutes before the class.

Interviewer: What devices would you want this to work on?

Client: Android and iPhone ideally, it should load fast and run on smart devices easily.
